Council Finds Mechanics' Lien on Town Bldg

To Investigate Validity of The Placing of Lien

Town Council met in regular session last Monday evening with Mayor Sangster in the chair and councillors Rindahl. Brydle. Moore. Hope. Evans and Newnham present.

Mr H Dacre was present and asked permission to report the meeting for the Calgary Albertan. His request was granted

Mr. Roy Schmidt waited on council and wanted to purchase shack, but as it had not reverted to the town no sale could be made.

Solicitor Baird wrote in connection with liens against the old Ornamental Iron building, as requested by council. His report showed that there were mechanics' liens to the amount of $442.00 against the building during the time W Gray had an option on that building. On motion of councillors Brydle and Newnham it was decided to get legal advice as to the validity of the lien under the circumstances.

The matter of securing an assessor for this year was left over till next meeting.

A letter was read from the Utilities commission advising council that an attempt would be made in the near future for a re-adjustment of the towns indebtedness. The letter was received and filed.

A letter was received from the local Legion, asking for a grant from the town for the up keep of the building recently purchased as a memorial and dedicated to fallen comrades. On motion of councillors Hope and Brydle the letter was referred back to the Legion asking that the amount of grant expected be stipulated and that same be taken up at next meeting.

Councillor Moore was appointed representative for the council on the Red Cross executive.

Councillor Rindahl submitted a questionere, prepared by the local Social Credit group and asked for opinions on the several questions which were as follows:

Should we refund to 2½ or2¾ or what rate?

Will it destroy our credit?

If the federal government refuses to guarantee the refunding bonds should we proceed any way?

Should the province proceed at once to take steps to reduce mortgage interest rates? To what level 5% or less?

Would such action drive away capital from our province?

What steps could be taken by an almost bankrupt province to mete the situation in case financial boycott was attempted?

Should the Debt Adjustment Regulations be modified to encourage loans by granting better security?

No action was taken by the council in regard to the answering of the questions.

The setting of the estimates was left over until next meeting

Boxing Day, Dec. 26th and the King's Birthday, June 23rd were voted public holidays in the legislature last Monday.

Major Douglas Will Be Here March 30

Cables Premier To This Effect Last Monday

Major C H Douglas, Social Credit founder and special reconstruction advisor to the Alberta government, probably will arrive here about March 30 to begin his new servey of provincial affairs with a view to instructing Social Credit. Premier Aberhart announced late Monday.

He had just received a cablegram from Major Douglas, indicating that the British economist would leave London about the middle of next month, the premier said. Major Douglas had indicated at the same time that he was writing immediately to supply more details.

Summer School in England Next July

Invitation Extended to Visitors From All Parts of Empire

The Empire Summer School of the Royal Empire Society, of 7-9 Hilton House Terrace, London, S W 1. draw from overseas many visitors anxious for first-hand information from first-rate experts, and an attractive programme has been arranged

The fourth School, to be held at Bristol University during the last week of July from Friday, July 24th, to Friday, July 31st.

The speakers will include leading men in all lines of activities from all parts of the British Empire and will deal with problems and national matters of interest to all British Subjects.

Those attending the School will be the guests of the Bristol branch of the Royal Empire Society and of Bristol University They will find that everything will be done to make them feel at home. There will be mayoral receptions and a visit to Badminton, the seat of the Duke of Beaufort. They will be taken round Bristol and Bath and the neighbourhood. places full of historic and present day interest. A Steamer trip up the Estuary will be arranged for them and an entertainment at the Clifton Zoo.

Members of the School will be accommodated, in three of the University Halls. which are in beautiful grounds with gardens and tennis courts. The School is open to all men and women interested in the British Empire and is not confined to fellows of the society.

Those contemplating visiting the old country this comming summer should make it a point to attend these meetings.

This is Educational week all over the Dominion.

All this week and next Mon. Tues. Wed. half-hour bargains will be on at the New Dreamland theatre. Admission for adults will be 25c straight up till 7:30 p.m.

King Edward's broadcast message to the Empire will be heard by Canadians on Sunday the Canadian Radio Commission announced. The King's message, which is expected to last about 10 minutes, will be carried over the commission network starting at 11 a m E S T.

Co-Op. Standing Co.-Op. Loans $1,574,625

Repayment Exceeds Loans For 1935 by $45,000

Total loans outstanding under the provincial government Co-Operative Credit Societies Act at the end of 1935 amounted to $1,574,625.12.

But repayment of outstanding loans exceeded new loans made during the year by about $45,000 it was stated in the annual report of the supervisor of co-operative credits tabled in the legislature by Hon. Charles Cockroft, provincial treasurer.

Value of loans outstanding at the end of the year showed a decrease of about $7,000 compared with the amount on the books at the end of December 1934. New loans amounting to $76,472 were issued 1935 but payments received on outstanding loans amounted to $120.045.16

G M Stewart, District inspector of Dominion Seed Branch Calgary, has stated that Alberta is in a worse position insofar as pure seed is concerned than it has been at any time during the last 25 years.

Mr. Howard Kearney Passed Away Monday

Homesteaded West of Here 27 Years Ago

After being confined to his home for the past year and a half suffering from a lingering illness Mr. Howard Kearney passed away last Monday.

Deceased was born in New Brunswick and when a young man left for United Stases where he resided till 1909 when he came to this district and took up pa homestead in the Breezeswn district. About seven years ago he gave up farming and came to town where he has resided ever since.

Before taking ill Mr. Kearney was a robust man with a fine physique and a military carriage, the envy of many younger men.

Deceased who was 68 years of age is survived by his widow and one daughter, Mrs. W Watters.

The funeral takes place this afternoon at 2 o'clock from St. Ambrose church. The remains will be interred in Redcliff Cemetery.

MUT TREATMENT FOR FROSTED GRAIN

It is probable that a considerable quantity of seed grain damaged by frost will be sown in Alberta during the coming spring. Studies carried out at the University of Alberta suggest that the vitality of frosted grain may be seriously impaired by the use of formalin for the treatment of smut. The Field Crops Branch of the Provincial Department of Agriculture suggests that such grain should preferably be treated by one of the dust germicides such as Improved Ceresan or Lytesan. If formalin is used the strength of the solution should not be stronger than one part formalin to 320 parts of water.

Poor Attendance At the Last Show of Little Theatre

Was Largely Due to Snow and The Cold Weather

After being postponed on account of severe weather the Little Theatre entertainment the last of the season, waas put on lastt Friday evening.

Although the weather had considerably moderated the deep snow and the theermometer still onssiderably below zero. no doubt kept a number away. As a result the hall was only slightly over half filled for the occasion.

The program opened with the High School Oratorical Competition and all were of the opinion that the fine addresses given were the best the school ever produced.

So well did each competitor render his and her part that the judges experienced some difficulty in deciding upon the winner Eva Lien, Geo. Ballantyne, Emma Podesta, Reg Rose and Phyllis Sheldon. Emma Podesta, with the subject: "Builders of Destiny" was awarded the first prize.

The play: "Who's Crazy Now?" was put on by the local Vega Lodge. In this an old maid, portrayed by Mrs Kellett, advertised for a husband. The adv. was answered and the many complications experienced in completing the contract were most amusing except in cases where some of the comedy was much overdone. Those taking part were: Mrs. Kellett, Geo. Kitchen. Mrs Jones, G Newnham, and H Leppard.

"The Way of Attainment" was put on by the young people of St. Ambrose church. This was a nice little Sunday School play in which there was a good moral, but lacked a fitting climax which was, no doubt, the fault of the author. Four of the characters made a wish at the wishing well. One for power, one for riches, one for peace and one for love. All thought they had been disappointed in their wishes but when attention was drawn to their surroundings and were given the right out-look on life all were agreed that their wishes had been fulfilled. Those taking part were: E. Fairhurst. W Balmer, Annie Shaw. Mary Broughton, N Rose, Ruberta Shaw, May Martin Doug and Dora Willis.

During the evening the intervals were nicely filled by the orchestra which was arranged for the occasion.

SCHOOL NEWS

The regular weekly meeting of the High School Literary Society was held on Wednesday 19 A dramatic competition between the three Literature classes and the French II class was held. It was prepared entirely by the students. Mr. King acted as judge and decided the Literature III class winner. They put on a scene from Abraham Lincoln. All the upstairs rooms were in to see the competition and it was very well enjoyed by all.

World's Smallest Baby Fights For Survival. Weighs 1 pound

Dinner a la eye dropper

Mrs. Anne Vogt

Hourly meals of 30 drops of diluted milk and 5% solution of milk sugar are fed tiny Nancy Ann Vogt with an eye dropper to build up the one-pound infant, now known as the smallest baby in the world. She is kept in an incubator where a temperature of 100 degrees is constantly maintained. Insert shows the tot's mother. The child's head is slightly larger than a tennis ball.

'SALADA' TEA is delicious

Making And Unmaking Deserts

The area known to-day as the prairie provinces of Western Canada appeared on the maps a few decades back under the designation "Great American Desert".

That was a misnomer, known only to a handful of people who wanted to maintain the area as a preserve for fur-bearing animals. The truth was that the great bulk of this large territory was not only not a desert but was covered with a luxuriant turf and a substantial portion of it was the habitat of trees and shrubs.

Like most truths this verity came to light and thousands of people flocked in, converted millions of acres into farmsteads and proved that the land was good and capable of producing quality grains, grasses, vegetables and livestock in abundance.

After taking possession of this newly-discovered heritage the settlers proceeded to develop it. The sod was turned over, at first a few acres at the time but later, with modern equipment more accessible, they plowed it up by the square mile and grew grain in huge fields. Trees were cut down and every shrub torn out by the roots. Mile long furrows without an impediment was the objective. Prairie sod, except for small reserves for pasture disappeared. Trees and shrubs vanished.

Then came the summer-fallow method of cultivation to give the land a rest from cropping and permit it to store up a reservoir of moisture for a succeeding crop. In this process the land was worked up into a fine tilth—turned into dust, the finer the better, it was thought.

By the time this system had become well established, the humus and root fibre of the original prairie sod was well worked out and the soil became finer texture each succeeding year. Then came the drought, several years of it for some sections, and during this period the high prairie winds whipped the fine dusty soil into the air, drove it hither and yon, piling it up against fences and buildings and covering highways and what pasturage remained.

In some districts the fine soil was swept off down to hardpan and that is the plight of these districts to-day. If these reckless methods are continued, the denuded area will increase in size and unless an extensive program of rehabilitation is followed the time may come when the "Great American Desert" will be a reality instead of the misnomer it once was.

There is abundance of evidence that man can and does make deserts, as witness W. L. Lowdermilk, associate chief of the Soil Conservation Service, United States department of agriculture, who declared in a recent magazine article that the history of civilization "may be interpreted in terms of soil erosion, as direct is the relation between the productive condition of soils and the prosperity of the people."

Mr. Lowdermilk refers to archaeological discoveries demonstrating that the Sahara and Asian deserts, arid parts of Palestine, Mesopotamia and the Gobi and North China deserts were once teeming with human life and outlines the process which eventually converts fertile lands into areas of aridity and sterility.

Many students have attributed desiccation and the consequent drying up of streams to the removal of forests. That is only part of the story. The great enemy of the human race is soil erosion which has been associated with the habitations of man since before the dawn of history. The removal of vegetation, whether grass, brush or forest, exposes soils to the dash of rain or the blast of wind, against which they have been protected for thousands of years.

Topsoils blow away or wash away or both. Unprotected sloping lands are usually bared to hard and tight subsoils which drain off the water as from a tiled roof. The perennial streams, deprived of their reservoirs of supply, dry up except in rainy seasons, when they become torrential floods and sweep boulders and debris down the slope to deposit them on otherwise fertile lands. Then starving wild or domestic herds clean the devastated areas of all palatable vegetation, only to reduce the effectiveness of beneficial rains and accentuate aridity.

Truly, a dismal outlook, but fortunately residents of the western provinces and their governments are becoming aware of the danger and, for the first time serious efforts are being made to stem this waste and prevent ultimate disaster. Reference to the work and program of the Federal conservation committee in this connection was made in this column recently. Provided there is widespread knowledge of the causes of soil erosion and a lively appreciation of the plight to which it may ultimately lead, there need be no fears that plans will be rendered abortive for lack of co-operation on the part of the general public. For, if deserts can be made by man they can also be restored to fertility by human agencies working co-operatively but it is a slow process and an uphill job.

Included in the several recuperative agencies which the committee hopes to press into service to repair the damage already done and prevent further serious loss is a tree planting program. This year five million trees are to be distributed free to farmers in the three provinces from the Indian Head experimental farm. While five million may sound like a lot of trees, they will only make a small contribution to the problem. Many more will have to be planted to be effective on a scale proportionate to the problem to be solved.

Retired After Long Service

Registrar In Wales Held Position For Sixty Years

Sixty years as registrar of marriages for the Holwell district is the record of John Lloyd, of Haulfryn, Wales, who has just retired, in his ninety-first year. He claimed to be the oldest active Government official in the world. On one occasion he officiated at the marriage of a great-grandchild of a bride and bridegroom whose wedding he witnessed in his early days as a registrar.

According to the most reliable historical records, approximately 13,000,000 human lives have been lost in earthquakes.

Start Lonely Task

Men Building Fog Signal Off Coast Of Scotland

Five men have started on the loneliest task in all Britain. They are building an automatic fog signal beacon on the Stob Gorm, a rock in the Atlantic two miles north of the island of Croil, off the coast of Scotland. The men are living in a hut on the rock, and may be marooned there for many weeks.

In recent French army manoeuvres motorized troops were judged superior to cavalry.

In Java, thunderstorms are almost a daily occurrence.

STOP THAT COLD IN A HURRY WITH Grove's laxative BROMO QUININE

You can't be careless with colds. They can quickly develop into something much more serious. At the first sign of a cold take Grove's Bromo Quinine. Grove's has what it takes to stop that cold quickly and effectively. As all Druggists. Ask for Grove's. They're in a hurry for

Great French Flying Boat

Thirty-Ton Craft May Be Used For Ocean Service

Residents of the British West Indies are hoping for a sight of the giant new French flying boat, Lieutenant de Vaisseau Paris, when it visits France's colonies.

The 30-passenger ship, built for experiments in trans-Atlantic mail and passenger flying, will pass over the Leeward and Windward Islands in its trip, celebrating the 300th year of French rule in Guiana and the Indies. It will call at French Guiana, Martinique, Guadaloupe and French-speaking Haiti.

Taking part in the anniversary trip also will be five other aeroplanes, with the Emil Bertin, France's largest cruiser-minelayer, and the Surcouf, world's biggest submarine. They will be on hand for the inauguration of naval bases at Martinique and Guadaloupe.

Chief interest centres in the great flying boat. Powered with six motors, the huge craft has a wing spread of 160 feet and is 103 feet long. It has a cruising speed of 145 miles an hour. Its luxurious interior includes a large lounge, eight double first-class cabins, second-class accommodations, a kitchen, bathroom and even a bar. Most of these fittings have been taken out for the present trip, but they are being shipped across the sea to be reinstalled at Martinique.

The 30-ton craft, manned by eight officers and several mechanics, has been designed for cross-ocean flying by way of the southern route. If experiments prove successful, France hopes to make her the first unit in a service between that country and the United States.

The Largest Exhibitor

Irish Free State Heads List At British Industries Fair

The British Industries Fair, the great "shop window" of the British Empire, is being held in two sections this year as usual, and opened in London and Birmingham simultaneously. A dispatch from London states that the Empire country sending the largest number of exhibitors is the Irish Free State, Canada coming next.

And the Irish Free State has refused to proclaim King Edward VIII., although President De Valera did send a message of sympathy.

The Irish Free State does not want to swear allegiance to the British throne. But it does want all the advantages of belonging to the British Empire.

If the British bore grudges they would say that until King Edward is proclaimed at Dublin Castle, no Irish Free State goods will be admitted to the British Empire fair. But they will not do that, and the Irish are likely to do a great deal of business at London and Birmingham. —St. Thomas Times-Journal.

Bodyguard To King Edward

Chief Inspector Of Scotland Yard Named For Post

The personal bodyguard of King Edward VIII. will be Chief Inspector David Storier of Scotland Yard, former school teacher who acted in that capacity for Edward as Prince of Wales and accompanied him on his tour of Argentina.

Inspector Storier took over these duties a few years ago on the death of Chief Inspector Burt, who had performed them for ten years, "shadowing the Prince all over the world."

The new king, like his father, always has shown the greatest consideration for the man appointed as his personal "shadow". King George always treated Inspector Lane, present in command of Buckingham Palace police—like a friend.

Superintendent Green, personal detective of the late King, will now act in a similar capacity for Queen Mother Mary.

Luxury For Women Miners

Women workers of the Minto coal mine at Lochgelly, Scotland, are to enjoy the luxuries of $75,000 pithead baths, which have just been built. In brightly decorated rooms they are to enjoy spray baths, rest on divans, dry their hair before electric fires and have working clothes air-dried and cleaned ready for the next day's work.

Illuminated Dance Floor

Dancing on waves of light will, in effect, be possible when a new luxury hotel at Durban, Natal, is completed, its open-air ballroom a floor of glass. It will be illuminated from beneath in such a way as to give the effect of light waves passing through the glass.

New York state contains 49,204 square miles. 2197

Conservationists Meet

Says Sanctuary Idea Originated In Saskatchewan

A plea that conservationists use their voting strength in political elections was made to the North American Wild Life conference at Washington by Jay N. "Ding" Darling, former chief of the biological survey.

More than 1,500 games and fish authorities heard Darling's address at the conference's opening session after greetings were read from President Roosevelt, Prime Minister Mackenzie King of Canada and the president of Mexico.

Mr. King's message, read by L. B. Harkin, Canada's commissioner of national parks, said:

"The treaty between the United States and Canada for the protection of migratory birds indicates the intervention of interests between our countries in that phase of wild life conservation.

"Following the policy established by the treaty, Canada is pleased to join with the United States of America and the republic of Mexico in the present effort to advance the cause of conservation of North American wild life to the end that the full economic and asthetic possibilities of this great and distinctive resource may not only be enjoyed by the present generation but be handed down unimpaired for the future citizens of this continent."

J. B. Harkins and Hoyes Lloyd represented the Canadian government and Senor Juan Zinser spoke for Mexico.

Lloyd, who is secretary of Canada's advisory board on wild-life protection, told the conference the Dominion was making great progress in conservation.

"The sanctuary idea in North America," he said, "originated in Canada with the establishment in 1887 of Last Mountain Lake sanctuary in what is now the province of Saskatchewan, because it was recognized the invasion of agriculture would replace much of the interesting and valuable waterfowl life of the prairies, unless such bird safety zones were established."

SELECTED RECIPES

COFFEE CAKE

Temperature: 400 degrees F.
Time: 25 minutes.

1½ cups bread flour
¼ cup "Crown Brand" Corn Syrup
¼ cup milk
½ cup sugar
2 teaspoons baking powder
½ teaspoon salt
¼ cup shortening
1 egg

Sift together the flour, sugar, baking powder and salt. Cut in the shortening with a dough blender. Heat the egg until light, then add the milk and the "Crown Brand" Corn Syrup. Add to the flour mixture and stir just as little as possible. Pat into a 9-inch cake pan which has been greased with Mazola. Spread the top with melted butter and then sprinkle on lightly the following mixture:

2 tablespoons butter
2 tablespoons "Crown Brand" Corn Syrup
2 tablespoons Benson's Corn Starch.
¼ cup cracker or cookie crumbs
½ teaspoon cinnamon.

This crumb mixture should be well mixed before putting into place on top of the batter. Bake the Coffee Cake in a hot oven and serve hot.

Protest Tax

Appeal Will Be Made To Privy Council In England

Appeal will be made to the privy council to determine the constitutionality of the Manitoba government's two per cent. wage tax as it applies to federal government employees in that province, it was learned in Winnipeg. Decision of counsel for the civil servants to carry the appeal to the Empire's highest tribunal follows the recent adverse decision handed down by the supreme court of Canada. It is believed the case will be argued in London next June.

Colorful Styles For Men

Colored dinner coats, pastel champagne coats, royal blue evening capes and Algerian striped suitings were featured among the 1936 styles for men which were released when hundreds of delegates from all over Canada and the United States gathered in Toronto for the annual international convention of the Merchant Tailors' Association.

Death Ray Harnessed

Will Now Be Assigned To The Task Of Saving Human Lives

The most potent death ray yet devised by man was assigned to the task of saving human lives.

Tests of its power in this respect were prepared in the physics laboratory of the University of Illinois.

The ray, a beam of neutrons 14 times more deadly than X-rays, was to be shot from a scientific "gun" now being assembled under the direction of Dr. P. G. Krugere.

Human approach within 50 feet of the "gun" was unsafe because of the speed with which the ray destroys the white corpuscles of the blood. All shields, including those normally used for protection against X-rays and radium, are vulnerable to the deadly beams. The "gun" must be operated by remote control from a distant switchboard.

Experiments have shown, Dr. Krugere said, that the rays reduce the white blood count from 8,000 to 300 or 400.

Although this means almost certain death to normal humans, the physicist asserted, it may mean just the opposite to victims of lukemia, the disease in which white corpuscles grow so fast they kill off the life bearing red ones.

Another possibility, he said, was use of the ray to kill the wild growling cells of cancer and Hodgkin's disease.

No Truth In Stories

King Edward Cannot Visit Dominions In Near Future

Stories of a possible visit in the near future to the Dominions of the king or any members of the royal family should be taken with a good deal of reserve.

To begin with, the court is in mourning for nine months. Then, the coronation will follow. Whether the king will go to India for a coronation ceremony in Durbar is believed to be quite undecided.

Sooner or later, it is likely the Duke of York, heir presumptive, will make a tour of the Dominions as did his father when he held the same title.

"The Bedouins," says a returned traveler, "are as arrant thieves as ever." Still silently stealing away.

Kipling Knew His Bible

Was Familiar With Subject Matter Of Every Chapter

Two of the greatest hymns in the church hymn book of the protestant churches are "Lest We Forget," and "Hark the Herald Angels Sing." They are the common property of all the churches. Kipling wrote one, Wesley the other. Kipling knew the subject matter of every chapter in the Bible. These great Englishmen can be broad in their tolerance of many errors, yet they never get far from the Bible. In reading Kim and many of the tales about the soldiers in India, it would be hard to think of their author as a Bible student. He must have carried a Bible with him in all his wanderings through India. What a lot of young men throughout the country and the United States would think it useless encumbrance. But the young men of England who have been well taught, who can see their country as the defence against the inflow of barbarism that threatens the whole world, love the Bible and keep it near them.

Colonization

Four plans of colonization in Saskatchewan, financed by British capital, have been outlined to the provincial government by a delegation of citizens from Melfort and Wolseley.

ARE YOU TROUBLED WITH NERVES?

Do you find it hard to go to sleep at night? Do you feel poorly rested in the morning, "jumpy" all day, and "ragged" by evening?

Then take Wincarnis. Here's a delicious wine, not a drug, that soothes nerves at nothing else can; that helps you quickly to sleep and floods your whole being with vibrant new energy.

Wincarnis brings you all the valuable elements of grapes combined with the highest grade beef and guaranteed malt extract. Almost as soon as you begin taking Wincarnis, you feel wonderfully better. This is because Wincarnis enriches your blood, soothes your nerves and creates lasting reserves of strength and energy.

Over 20,000 medical men have proved in practice the value of Wincarnis in cases of jumpy nerves, insomnia, anaemia, debility and general indisposition. Get Wincarnis from your druggist.—Sales Agents: Harold F. Ritchie & Co. Ltd., Toronto. 18

Bread Eaten By Londoners

In Weight Would Average 1,500 Tons Every Day

That simple request at the London breakfast or teatable, "Will you pass the bread, please?" is just the end of as wonderful a story as has ever been told, says the Overseas Daily Mail. The beginnings of it reach right away to the cornfields of England, to the prairies of Canada and the United States, the pampas of Argentina and once in a while to India and Russia. But in between the cornfields and the table there is a great wealth of incidents, of scientific organization and big-scale operation and manipulation which are little guessed by the diner who makes that simple request. If an attempt were made to relate the whole of the story the figures that would have to be mentioned would reach astronomical dimensions.

It is fair to assume that the eight millions of people in the metropolis each consumes half a pound of bread a day. This means that about 1,800 tons of bread disappear down the throats of London's citizens every day of the year. If the whole mass were represented by 2-pound loaves and placed side by side there would be a chain of bread that would stretch from London to Brighton and back again. And it would utterly disappear in 24 hours. For that bread London pays about £35,000 every day.

The shipping of wheat has a romantic history. England is the largest buyer in the world, and in the season the argosies laden with the golden grain stream across the Seven Seas, and the normal arrivals exceed 5,000,000 tons. The most picturesque scene in this business is the annual wheat race from Australia by the "windjammers" some of whom come right up the Thames to London's docks, and it is a pretty sight to see one moored alongside a huge dock mill with its lofty masts towering above the big mill buildings. The mills run 24 hours to the day for five days a week, and some of them will supply enough flour in a day to make 350,000 to 400,000 pounds of bread.

After the millers come the bakers, but these are less numerous in London than they used to be. At one time the working baker was a figure familiar to everyone. There still survive a few of the old private bakers' shops, but thousands have been displaced by the modern factory-baker, each with an output many hundred times larger than that of the most flourishing working baker. The growth of these large factory bakeries is due to the perfection of bakehouse machinery, which makes it practicable for every operation to be performed mechanically, and to motor traction, where the old-time baker depended for custom on what he could sell over the counter and by horse van in the neighborhood, the factory bakery with its fleet of motor vans can deliver to shops and houses within a radius of a dozen miles and more.

Better Machines For Farm

Implements Of Two Decades Ago Declared Out Of Date

Even greater improvement in farm machinery during the next 20 years than was made in the last 20 is foreseen by S. H. McCrory, chief of the Bureau of Agricultural Engineering of the Department of Agriculture. He holds that many farming implements of two decades ago are as much out of date now as a 1915 automobile. He believes that smaller and more simplified machines will be developed. Mr. McCrory quotes figures compiled by a committee of agricultural engineers to indicate the efficiency of modern farm machinery. On the quality-efficiency rating of 100 fixed twenty years ago, the ensilage cutter of the present era rates 215; the grain thresher, 196; the power corn shelter, 190; the manure spreader, 180; the cream separator, 145; the grain drill, 140; the tractor plow, 190; the corn picker, 210; the disk harrow, 190, and the grain binder, 170.—New York Sun.

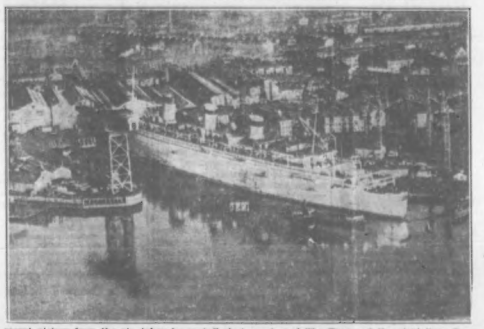

Swept Chimneys At Palace

William Connor, who formerly swept the chimneys of Buckingham Palace and Windsor Castle, has died in a hospital in Edmonton, England, at the age of 77. He was very proud of his calling and his doorplate bore the inscription: "To His Majesty the King."

By improved technique, surgeons report that it is now possible to cut and lengthen bones so to extend a shortened leg as much as five inches.

The hardest job of all is trying to look busy when you are not

GIANT BRITISH LINER PREPARES TO MAKE HER MAIDEN VOYAGE

A recent picture from the air, taken by a staff photographer of The Times, of the giant liner Queen Mary in the fitting-out basin at Clydebank gives an excellent impression of her size. She will leave this basin for Southampton in March, and will begin her maiden voyage from there on May 27th.

Alfalfa Crop Kept Fresh

Test With Dry Ice And Air-Tight Silo Was Success

An experiment successfully concluded in Clark county, Ohio, its directors insist, foretells the doom of present methods of hay-making and of the large barns now deemed essential to a prosperous farm.

With dry ice as a preservative, an alfalfa crop was kept fresh and green for four months in an air-tight silo on the Lynn-Guernsey dairy farm, northeast of Springfield, and now is being fed to a dairy herd while all other herds are living on hay and artificial feeds.

The alfalfa, according to A. G. Bookwalter, owner of the farm, was preserved at less expense than it would have taken to store it as hay.

Furthermore, it lost only 5 per cent. of its nutritive value, whereas alfalfa stored as hay loses 74 per cent. of its food value.

Prof. Oscar Erf, of the Department of Agriculture at the Ohio State University, directed the experiment.

When the silo was opened, Erf conducted hurried tests and announced that the alfalfa had retained almost all of its richness.

A vast increase in the quality and quantity of milk in winter months will result from the new method of preserving feed, Erf believes.

Twenty-four tons of alfalfa were stored in the specially constructed silo last September, together with dry ice, which cost about $24.

As it evaporated, dry ice forms carbon dioxide, which in turn forces the lighter oxygen to the top of the silo, away from the alfalfa.

Thus the gasses protect the alfalfa from the oxygen, which produces fermentation.

A specially prepared metal silo was used for the experiment.

Laughter Club Formed

Members Are Pledged To Spread Gaiety Every Day

A Laughter Club, which holds weekly meetings to promote the spread of laughter and gaiety, has been formed in Prague. Its members pledge themselves to tell or play one joke a day. Membership is free, but one indispensable qualification is the ability to sing or whistle the song of the cuckoo. It is the club's official song. Also thin people wishing to join must be nominated by a fat member, and vice versa. The motto of the club is: "Laughter for Health." Charlie Chaplin and Laurel and Hardy have been asked to become honorary presidents. Any member wearing "that crisis look" is asked to resign if he does not change his expression after being warned.

Gloves Are Important

Have Always Played Big Part In Affairs Of Mankind

Gloves have always played an important part in the affairs of mankind.

At one time they were worn by the clergy as a sign of having hands clean of evil. Gloves were recognized as payment for some small service, but if it was a more important one a small sum of money was enclosed in the glove. That was called glove-money. Gloves were used as a challenge to fight, and as a pledge of unbreakable faith. In medieval times a lady's glove was carried by knights as both a symbol and a challenge. To be hand in glove with someone expresses a close companionship.

Moonstones are considered sacred and lucky in India. 2137

To Honor Leif Ericsson

On October 9 Saskatchewan Will Remember Norse Explorer

Saskatchewan will proclaim Friday, October 9 as "Leif Ericsson Day," in honor of the discovery of America by this Norse explorer about the year 1,000 A.D.

While it will not be a holiday, the government will suggest the day be observed by services in churches and exercises in the schools.

President Roosevelt has already taken similar action for the United States.

The Norse sagas say Leif Ericsson, son of Eric the Red, sailed westward with 35 men. He is believed to have touched first at Newfoundland. From there, legend says, he sailed on to what is now Nova Scotia, which he called Woodland.

He is reported to have stayed in Nova Scotia for two years from 1002 to 1004 A.D.

His brother Thorvald is said to have headed a second expedition to Nova Scotia in 1004 or 1005 A.D.

These explorations were conducted from Greenland where a colony had been founded by Eric the Red in 986 A.D.

Saskatchewan is the first province of Canada to issue a Leif Ericsson proclamation, Oct. 9, the date selected, is believed to be the day upon which Ericsson first arrived at America.

Bidding For Poultry Congress

United States Wants Next World Meeting Held There

A committee had been formed in Chicago to take steps to secure the holding of the seventh World's Poultry Congress in the United States in 1930. H. E. Van Norman, 308 West Washington street Chicago, is provisional secretary and called a meeting of representatives of the leading poultry organizations in the United States which was held in New York on February 7.

Wood-tears was the Indian name for rubber in its milky form flowing from the Hevea tree.

Higher Train Speeds

New Light Railway Equipment To Be Tried Out This Year

Lightweight railway equipment, designed for higher speeds, will probably be in operation on Canadian railroads this year, W. A. Mather of Winnipeg, general manager of the Canadian Pacific Railway Company's western lines, said in an address before the annual meeting of the transportation and customs bureau of the board of trade at Vancouver.

The equipment, he said, is now being constructed in the railway shops and will be tried out first on Eastern Canadian lines. The experience gained will be put to use in designing future equipment of this type. Air conditioned cars will also be tried out on the Canadian lines this summer.

Mather said Canadian railway companies are keeping in touch with modern transportation but the Canadian climate and sparse population force them to move cautiously. One drawback to the introduction of the lightweight equipment, he said, was the fact that winter conditions make imperative the adding of six tons of insulation and heating equipment to each car.

A Cruising Magnet

Used In Michigan To Clear Roads Of Metal

The Michigan Highway Department has collected about half a ton of scrap metal, ranging from scissors to tobacco tins, by means of the cruising road magnet. This novel magnet costs about 35 cents a mile to operate and covers an average of 42 miles a day. Built by the Highway Department, the machine is eight feet wide, 11 feet long and six feet high. It is drawn behind a truck. The metal objects picked up are tripped into a hopper.—New York Times.

About the only different between a hunting license and a driving license is that there is no close season for pedestrians.

"I don't think I should tell him just yet that his wife's had triplets."
—Lustige Blatter, Berlin.

Making Success Of Work

Russian Girl Proves Women Can Be Electrical Engineers

When Esther Rabkin received a degree in electrical engineering at University of Alberta convocation services last May, the sceptics asked, "who would employ a feminine electrical engineer?"

"Wait and see," said Esther.

To-day she is working in the General Electric Company's Toronto plant in research on electric light bulbs. Policy of the organization is to provide university graduates with extensive training before allowing them to attempt practical application of their knowledge and the former co-ed is now being trained by expert scientists.

She came to Canada from Russia. She intends to return there some day. Perhaps changing conditions in the Soviet have influenced her original determination to return there immediately upon graduation, says Dr. H. J. MacLeod, head of the University of Alberta electrical engineering department.

"Esther is the only girl to have ever received an electrical engineer's degree at the university," states the professor. "She was an excellent student."

"More important, she had courage and the strength of her convictions. Her success in obtaining employment should not influence other prospective co-eds in choosing an electrical engineering degree because her qualities and abilities are of the variety possessed by few who enter the university," declares Dr. MacLeod.

No Change Anticipated

Royal Ranch In Alberta May Retain Name Of "E.P."

No change is anticipated in either the name or proprietorship of the "E.P." ranch near High River, Alta., following the accession of its royal owner to the empire's throne.

The ranch, purchased in 1919 by the present King when he was Prince of Wales, is purely personal property and as such is not included in those perquisities which more or less automatically become part of the estate of the heir presumptive to the throne.

Since the acquisition, the royal interest in the property has been constantly maintained.

Named "E.P." for "Edward, Prince", it is thought unlikely this designation will be changed to "E.R." or "E.R.I." now that he has become "Edwardius Rex et Imperator."

Western ranchers point out a regard extend hand known all over the continent is a great asset and one which could not be altered without considerable monetary loss.

Professor W. L. Carlyle, manager of the ranch, has no information on the question. Nor could he make any comment on reports that the new King might visit his ranch as soon as the cares of state permit.

Mrs. Carlyle, Mrs. Carlyle and employees of the ranch attended memorial services in High River on January 28.

The Law Of Justice

French Writer Unable To Conceive Civilization Without England

Paris despatch in London Morning Post of Jan. 2: "The defeat or even retreat of Britain would be a disaster without precedent and without name."

This conclusion on the possible outcome of what he describes as the British-Italian antagonism that has emerged from the Abyssinian war is made by M. Gabriel Hanotaux, of the French academy, in an article in the "Echo de Paris."

The antagonism, says M. Hanotaux, is based fundamentally on the question of the domination of the Mediterranean. "It is a question of civilization itself," he declares. "Think for a moment. Can you conceive of civilization without England?

"Who is it that has spread throughout the whole world the law of justice, the authority of right, the credit of the spoken word, the security of exchanges? Who is it but the English gentleman?"

The rivalry over the domination of the Mediterranean, declares M. Hanotaux, dates back to before 1913, before fascism, when Italian ambitions had already begun to be limitless.

"It is a question of Britain's world communications. Her whole empire is at stake. It is that which has stirred the soul of Britain."

Roscoe Ates, American actor, who is in England, cured himself of stammering only to find that he could make $3,500 a week by continuing to stutter on the stage.

Protect Resources

Saskatchewan Plans To Protect Natural Resources Of Province

In protection and development of the natural resources of Saskatchewan there is opportunity to bring about a better balance in the economic life of the province, said Hon. W. F. Kerr, minister of natural resources, addressing the annual meeting of the Moose Jaw Wild Animal Park Society, held at the Grant Hall hotel recently.

While agriculture will undoubtedly remain the great primary industry, he continued, the varied and wealthy natural resources of the province are assets which can well be used to balance the economic life of years to come. These resources must be fully protected both by government and people, he urged. The government, he explained, is restricted in expenditure of money on protection and developments at present because of the necessity for using funds from all sources of provincial revenue for relief and care of poverty stricken residents of the province.

Nevertheless, he said, every effort was being made to protect resources, particularly forests and wild animal life. To protect the forests and animals of the north the department has been forced to refuse hundreds of requests from new immigrants to the northland, many of them from drouth-stricken southern Saskatchewan, that they be allowed leeway in fish and game bag limits and in use of timber.

To protect small animal life the department intends re-establishing the bounty on timber wolves. The wolf menace has increased greatly he explained, and at present there is now legislation allowing the department to place a bounty on the wolf. Such legislation will probably be introduced at the coming session of the legislature, he intimated.

Power Is Exaggerated

Public Opinion Not Greatly Influenced By Means Of Radio

Radio is now, and in this business of politics and parties it enjoys a prestige that, in this country especially, attaches to novelty. Actually there is good reason for thinking that people have been greatly exaggerating the potency of this new engine of public opinion. It is too easily taken for granted that any speaker who goes on the air has a vast number of his countrymen hanging on his words. If they do listen to him it is too easily taken for granted that the radio orator holds the fortunes of his country in the palm of his hands.

It is not so simple as all that. In the first place there seems to be no very convincing way of measuring the size of a radio audience. People largely guess about the "millions" of radio listeners who rally to this or that orator. It is still harder to make sure the spell which the orator casts over his audience. There are telegrams and postcards, to be sure, but they do not say how long the spell under which they have been written will endure.—New York Times.

Most English Of Englishmen

Late King Was Precisely Type British People Wanted

George Windsor was the most English of Englishmen. We could feel the harmony of what to outsiders seems inconsistency, a republic whose people rule themselves in the name of the King. And so he made a good King of England, for he was precisely the kind of king that Britain wanted.

George V. knew his job and its limitations. He attended strictly to business. He hedged his position with the full amount of dignity his nation demands and no more. When occasion permitted him to initiate action without offending tradition or propriety, he did so with decision that showed he knew what he was about.—San Francisco Chronicle.

A Queer Flying Machine

An ordinary bicycle with bat-like wings attached—this is one of the queer flying machines on view at the Concours Lepine, the exhibition of inventions in Paris every year. Another tiny aircraft driven by human power is called the "Pigeon-plane." It has a body like a pigeon, wings like those of an aeroplane, and is mounted on three wheels.

Caribou Move South

Caribou herds have been recently sighted 50 miles south of McMurray. This is believed to be the first time since the white man came into this country that the caribou have travelled so far south. The animals are thought to have drifted south in search of fresh grazing.

Got complete relief from pains and gas—

Fruit-a-tives brought quick relief from irritation.

Mrs. S. Everitt, St. Catharines, says, "Indigestion bothered me severely. I was always uncomfortable after meals and troubled with gas. I tried Fruit-a-tives. They soon brought me complete relief and toned me up generally." Fruit-a-tives are really different! They contain extracts of APPLES, ORANGES, FIGS, PRUNES and HERBS. A part of nature they act naturally to help all organs function in a normal healthy fashion. Their tonic effects have brought lasting good health to millions.

FRUIT-A-TIVES
A FAMOUS DOCTOR'S PRESCRIPTION

WORLD HAPPENINGS BRIEFLY TOLD

Dr. P. J. Kelly, of the University of Glasgow, announced that he would leave to take charge of a British ambulance unit in Ethiopia.

The late Lord Daisiel, prominent British newspaper publisher, left nearly £400,000 (about $2,000,000) to the government to apply against its public debt.

The house of assembly rejected by a large majority a suggestion the Union of South Africa should remain neutral in any war not concerning her. The vote was 94-14.

Laws to strengthen Belgium's national defences soon will be introduced in parliament, Premier and Foreign Minister Paul Van Zeeland announced in a speech on the international situation.

Persistent rumors Prime Minister Mackenzie King would visit England in the immediate or near future were set at rest by his statement he would not leave Canada while parliament was in session.

Members of the Flying Clubs of Canada Association spent 13,807 hours in the air during 1935, compared to 10,581 in 1934, the association was told at the opening of its convention at Hamilton, Ont., by Secretary George M. Ross.

Air-conditioning equipment will be in operation on a number of the more heavily travelled lines of both railway companies during the coming summer, a joint statement issued by the Canadian National and Canadian Pacific Railways stated.

Building permits issued in Greater Vancouver during January this year totalled $377,395, more than 3½ times greater than the total for the corresponding month of 1935 when permits were issued for buildings valued at $97,035.

New World Record

Hank Cleman, Of Toronto, Sets New Mark For Mile Walk

Hank Cleman, Toronto's renowned pedestrian, is the new world record-holder for the one mile walk. The Achilles club veteran stepped off the distance in six minutes 23.7 seconds at the Millrose track and field carnival in Madison Square Garden, New York, to surpass both existing marks.

He not only cracked the indoor mark of 6:37.2, set by Mike Pecora four years ago in the Garden, but surpassed the long standing world outdoor record of 6:35.8, made by the great Canadian, George Goulding, at Montreal, in 1910.

Dominion Drama Festival

Vancouver Club Chosen To Represent British Columbia

The Progressive Arts Club of Vancouver will represent British Columbia at the Dominion Drama festival in Ottawa in April.

The Vancouver club was chosen as the coast's representative when adjudicator Allan Wade awarded them first place in the British Columbia competition for their presentation of the social drama, "Waiting for Lefty."

"Lazarus Laughed," two scenes from the play by Eugene O'Neill, presented by the Vancouver Little Theatre Association, was second choice.

Another Smuggling Trick

When a solitary barrel of olive oil arrived at Cairo, Egypt, from Palestine, the police, becoming suspicious opened it. Inside they found a little water-proof package floating in the oil. It contained nearly a pound of opium. The person who came to collect the oil has been arrested.

VICKS COUGH DROP

Secret Documents

Papers Show How Woodrow Wilson Guided U.S. Neutrality Policy

Secret documents of the U.S. state department disclosed how Woodrow Wilson personally charted the government's neutrality policy in the stirring days prior to United States entrance into the Great War.

Page proofs of notes, letters, memoranda and other official documents which the department will publish soon include the rough outline of an early note to Germany, protesting unrestricted submarine warfare, drafted by the wartime president himself.

The draft was submitted to William Jennings Bryan, then secretary of state, April 22, 1915, as a result of the death of Leon Chester Thrasher, an American citizen, in the sinking of the British vessel Falaba March 28 in the Irish sea by German submarines.

Wilson proposed the protest should be placed "on very high grounds," and not be limited to the loss of one citizen's life.

His decision determining United States' policy was made soon after the first submarine sinkings, long before the destruction of the Lusitania and other ships inflamed American public opinion against ruthless undersea warfare.

Movable Sidewalks

Will Carry Passengers A Mile In Four Minutes

The "bi-way" sidewalk, a substitute for subways, which will carry its passengers a mile in a little more than four minutes, was described in its latest form to the American Institute of Electrical Engineers at New York.

The biway is a double sidewalk, one beside the other, one which starts and stops, while its companion never stops, but loads from its intermittent companion. Norman W. Storer, of the Westinghouse Electric and Manufacturing Company, East Pittsburg, said biways would cost less to construct and instal than subways and use less power.

Storer credited Ebenezer Hawkins of Islip, L.I., with originating the biway idea in 1874

In the latest plan the never-stop, or express sidewalk, moves at an average speed of 15 miles an hour, in cycles in which its speed ranges from 12½ miles an hour to 16½.

With the slower speed of the express, the start-stop sidewalk synchronizes every 42 seconds, to enable passengers to get on or off the express. The express sidewalk is fitted with chairs. The local sidewalk has no seats, but is fitted with handrails.

Lived Century In Caravan

Woman 103 Had Never Spent Day In A House

Old Mrs. Honour Matthews was born in a caravan. It was her cradle, her perambulator, her carriage for 103 years, and in a caravan she died.

Never in all her life did this wonderful old lady spend a day in a house. Throughout a life which began when William the Fourth was king she travelled, first with her parents and then with her showman husband, through the length and breadth of England.

Almost to her last day she could thread a needle without glasses; and when for her came the day when her eyes closed for ever, her sons and daughters were about her in the caravan.

Naval Construction

Four Powers Agree To Plan To Announce Program Each Year

The international naval conference agreed to a plan by which Great Britain, the United States, France and Italy will announce at the first of each year what their naval construction will be during the following 12 months.

The plan, offered as a compromise in an effort to limit the possibilities of a naval construction race, was the first major agreement reached by the conference in nearly three months of work.

Advertising Brings Results

Tourist advertising pays. Mr. J. D. Burton, chairman of the tourist committee, Yarmouth, Nova Scotia, says an advertisement in a New York paper brought 200 direct queries and one tourist family paid for the whole season's advertising in goods purchased at Yarmouth stores. Direct evidence of that sort cannot be thrown lightly aside.

One hundred and twenty million fish live in an average square mile of ocean.

There is no point on the earth where the moon never shines.

Why at 40 You Think You're "GROWING OLD"

It's Frequently Just an "Idea." Not "Old Age." And According to Scientists, May be Something No More Alarming Than A Touch Of Acid Stomach

At about 40, many people think they're "growing old." They're tired a lot. Have headaches. Stomach upsets. Dizziness. Nausea.

Well, scientists say the cause, in a great many cases, is merely an *acid condition* of the stomach. The thing to do is simply to *neutralize* the excess stomach acidity.

When you have one of these acid stomach upsets, all you do is take Phillips' Milk of Magnesia after meals and before going to bed.

Try this. You'll feel like another person! Take either the familiar liquid "PHILLIPS'", or the convenient new Phillips' Milk of Magnesia *Tablets*. Made in Canada.

Also in Tablet Form!

Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

PHILLIPS'
Milk of Magnesia

Grain Elevators For Argentina

Huge Sum Is To Be Spent On Construction

Approximately $22,000,000 is to be spent on the construction of grain elevators in Argentina, according to a decree issued by President Justo which approves in general the conclusion arrived at by the national committee on elevators.

The decree authorizes the ministry of agriculture to call for public bids to carry out the construction of the elevators as well as to negotiate the purchase of the existing Rosario terminal, with a capacity of 80,000 tons, now owned by a private concern, the purchasing cost being included in the total expenditure of 64,154,000 pesos (about $22,000,000).

In a preliminary statement issued by the ministry of agriculture covering the views of the national committee of elevators it was stated as their opinion that the construction of these elevators should be started immediately. The first stage will comprise 15 units with a total storage over 12 ports, at a maximum cost of 55,623,000 pesos ($18,356,000).

Palestine Regulations

Sale Of Land Must Be Made Under Certain Conditions

The Palestine government will prohibit the sale of land by owners unless they retain a certain minimum considered indispensable for livelihood, it was announced by J. H. Thomas, British secretary of state for the colonies, in a message transmitted to Arab political leaders by Sir Arthur Wauchope, Palestine high commissioner.

On the question of barring Jewish immigration, the British colonial secretary declared there could be no question of the stoppage of immigration, and that the government "does not contemplate any departure from the principle of the absorptive capacity of the country in fixing the immigration schedules."

A Russian Invention

Rubber Glider When Deflated Will Pack Into Suitcase

The latest Russian invention to advance interest in the sport of gliding is a rubber glider which, when deflated, will go into an ordinary suitcase.

The glider is a shapeless bag of rubber when removed from its case. It is spread out on the ground, a hard rubber tail piece and certain stiffening parts inserted and then the rubber is inflated through various valves. Tests in the air show the device does not collapse and well obeys the controls of flight.

Its weight is 92 pounds, its length 29 feet and its wingspread 39 feet. —Science Service.

The largest living non-ruminating even-toed mammal is the hippopotamus.

2157

To Stop War

Canada Cannot Take A Detached View Of World Affairs

Canada does not hold a "reserved seat" from which she can take an academic and detached view of world affairs, John W. Dafoe, president and editor-in-chief of the Winnipeg Free Press, warned in an address before the Empire Club of Canada at Toronto recently.

Decrying the idea that "differences and problems" across the sea meant little to the Dominion, the western editor asserted this country, with the rest of the nations, was "in the vortex and would suffer with the world if the wrong road was taken."

He spoke on "Roads to the Future", charting the course he said must be followed if the future were to be safeguarded. The three essentials for the building of a safe road, he said, were collective peace, collective machinery for the adjustment of frictions and inqualities in peacetime and a reliance upon the mechanics of democratic government.

The first step was to stop war, "if this be possible." A world for humans to live in could not be built while war was a recurrent possibility. Until peace was attained, "dealers in human 'futures' might as well take a holiday."

Advance In Medical Science

Two Unusual Cases Successfully Treated In Toronto

Successful treatment of two unusual cases in Toronto General hospital in 1935 was revealed in the hospital's annual report.

Using radium and X-ray, the hospital cured a 24-year-old Polish emigrant of rhinoscleroma—queer malady that turns the skin and mucous membranes of the nasopharynx to stony hardness. The patient was discharged after four months' treatment, the report said.

The other case was the providing of a woman patient with a new esophagus and pharynx, saving her from threatened starvation. The report described how "a tube of skin was infolded to replace the esophagus and pharynx." The operation was so successful the woman was on a full normal diet and had gained 15 pounds when she was discharged.

Royal graves are believed to abound on Iona Island, where, it is said, 48 Scottish, four Irish, and eight Danish and Norwegian kings lie buried.

MADGE TAKES A TIP...

DON'T RISK FAILURES ... Even a beginner can use Magic confidently because it is absolutely dependable. That's why Canada's leading cookery experts recommend it. Try Magic. See if it doesn't give you the lightest, most delicious muffins, biscuits, cakes you ever made! And Magic is so inexpensive to use—actually costs *less than ½ per baking!*

In Command Of Forces

The King Has Assumed Ranks Of Admiral Of The Fleet, Marshal Of The Army And Air Force

The King has been pleased to assume the ranks of admiral of the fleet, field marshal of the army and marshal of the Royal Air Force. The posts, announcement of which was made recently, were assumed at the time of his accession to the throne.

These ranks, formally placing the king in command of the kingdom's three defence forces, are the same as those held by the late King George.

Another formal announcement was of an order-in-council directing certain alterations in the prayer book of the Church of England.

In the prayer for the king, "Edward" is substituted for "George", and the petitions, for the royal family will read "Our Gracious Queen Mary, Albert Duke of York, the Duchess of York and all the royal family."

The Duke of York is included in this petition as being heir presumptive to the throne.

This order also establishes the future designation of Queen Mary. It had been thought her majesty would be called "Mary, the Queen Mother," or even possibly "The Dowager Queen Mary."

Bulgaria devoted 17,000 acres to cultivation of roses in 1934.

Classes in skiing are now being held at Nice, France.

To Make Inland Sea

Italian Engineers Are Starting Big Project In Ethiopia

An Italian engineering commission is in Assab, Eritrea, to complete plans for creation of a "new sea."

This sea will admit ships directly to the eastern Aussa region of Ethiopia where Francis M. Rickett and other promoters say there is oil.

The engineers expect to let the Indian Ocean flow into Danakil's sunken "Death Valley," which in some places lies 500 feet below sea level.

Thus they would bring Eritrean ports 100 miles nearer the interior from this southern port of Eritrea, for transportation of the thousands of tons of materials being brought from Italy to occupied Ethiopian territory.

The engineers, surveying between Massaua and Assab, plan to dig one canal to the north and one to the south, to maintain the level of the "new sea."

They estimate two years and 1,500,000,000 lira will be required for the job, hoping the Indian Ocean's flow will widen the small, man-made canals sufficiently to admit ships to the interior waters.

The engineers expect to inundate a now worthless territory 100 miles wide and 200 miles long, transforming a large desert area into fertile regions and lowering the temperature which is now often 145 degrees Fahrenheit.

"Suit" Yourself With A New Knit

PATTERN 5524

Come Spring—what's to succeed the top-coat? A knitted suit, of course, and none more serviceable or easily made than this softly tailored style whose neatly belted jacket is just plain knitting, with stripes in an easily learned contrasting stitch. Note the linked closing and crisp revers. The jacket would be smart too with a cloth skirt.

In pattern 5524 you will find complete instructions for making the suit shown in sizes 16-18 and 38-40; an illustration of it, and of all the stitches needed; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

New Assault On Everest

Leader Of Party Confident Peak Will Be Reached

Bound for the "last great adventure on earth," the first members of the 1936 Mt. Everest expedition left London, en route to Darjeeling, India, for a new assault on the world's highest mountain.

Three men and one woman departed first, and the nine other members of the party followed. The woman, Mrs. Noel Humphreys, accompanied her husband, Dr. Humphreys, only as far as Darjeeling.

Hugh Ruttledge, veteran leader of the 1933 expedition, again will lead the drive up the perilous snowbound heights toward the 29,000-foot pinnacle which has defied four previous attempts and has taken nine lives.

"I believe we'll make it this time," he said quietly, standing in the crowded boat train station. "With any reasonable weather, I'm confident of success."

In the 1933 attempt, Ruttledge's party fought its way to within 1,000 feet of the top—only to be driven back by a monsoon which broke nearly a month ahead of schedule.

"Housework is a cure for nervous troubles," reads the latest report of the Institute of Medical Psychology, of London.

There are more than 5,000,000 motor vehicles on American farms.

Save "LEFT-OVERS" with Appleford's Presto PACK WAXED TISSUE

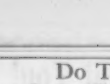

MORE CONVENIENT TO USE....

Just hang a package in your kitchen. You'll be delighted with its convenience . . for, with one hand, you can easily extract a single sheet at a time leaving the other hand free to hold the "left-over" being wrapped.

Do This to Ease Sore Throat *Instantly*

Relieve Soreness in Three Minutes This Easy Way

1. Crush and stir 3 "Aspirin" Tablets in ½ glass of water.

2. Gargle thoroughly — throw your head way back, allowing a little to trickle down your throat. Do this twice. Do not rinse mouth.

Takes medicine to combat a sore throat. Try it. Results will amaze you. "Aspirin" Tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.

DEMAND AND GET **"ASPIRIN"**

FLEMING'S FOLLY

— BY —

LAWRENCE A. KEATING

SYNOPSIS

The story opens with Link Fleming addressing a meeting of Boone County cattlemen, called together with the object of forming an irrigation company.

Roper Kilgo, the boss of the Rawhide and nearby ranges, who seemed to approve the plan, but was really opposed to it, had forced Soak Torney, a derelict mining engineer, whom Kilgo knew would be called upon to give his expert opinion in favor of the scheme, to reverse his earlier endorsement, and declare that irrigation in Boone county so far as Hamilton's plan was concerned, was only a newfangled way to waste money.

The meeting terminates, but Buzz Hamilton and his sister, Helen, Link and Kilgo stay behind and Helen asks Fleming questions about his irrigation plan. This angers Buzz, who accuses Fleming of trying to influence his sister and, as he asserts, ruin his "property." Buzz shoots at Fleming in an uncontrollable fit of anger, but Buster Townsend, Link's foreman, is shot in the stomach, and Fleming is uninjured. Buzz is arrested. The doctor attends Townsend and dresses his wound. Kilgo Roper suggests taking Helen to her home, but she refuses and Fleming escorts her home instead. This incident causes Roper to declare open hostility to Fleming.

Helen and Fleming form a partnership to provide irrigation for their own properties, Link goes home, and is surprised to find Kilgo there ahead of him. Kilgo tries to induce Link to drop his scheme, and when Fleming refuses, gives a signal by taking off his hat, and Link is shot at from outside the house.

Link kills Kilgo out of the house. Buzz Hamilton is sentenced to three years' imprisonment for shooting Bud Townsend.

On his way home after the trial of Buzz was over, Link meets Soak Torney, who starts telling Fleming why he withdrew his approval of the water scheme. Just as he was about to tell the name of the man who had forced him to do so, Torney is shot and killed by a rifle bullet. Link hunts around to find the killer, but finds nothing. He comes across Jackpot Bell watering his horse, and Jackpot warns Fleming that if he wished to live he had better leave the district.

(Now Go On With The Story)

CHAPTER VI.—Continued

"You bet!" Bush warned earnestly. "From now till I see water backed up in that dam—if you build one and if it really works—I wouldn't trust a soul if I was in your boots, Link. But say," he added, as both men swerved their horses to depart, "if things get real tough, we both got smoke-irons that usually work when we pull the trigger. We think you're all wrong and foolhardy too—but remember that anyhow. So long, Link!"

He watched them out of sight in the darkness. Then shrugging his shoulders, he rode for the ranch house. Mention of the dam had reminded him of the plans drawn by Soak Torney for the country-wide irrigation. He wanted to re-examine them to learn whether they could be modified to suit his altered purpose.

When he entered the ranch house it was to find the place cold and lonely. Link set to work to build a fire in the squat, long-unused iron stove. He fumbled for a match but found none. Turning to the small kitchen, he spied the roll of blueprints, and at once his attention swerved. He spread them out on the slab table, holding them down with his hands while he began to study them.

Torney had planned a large dam to be built where Link's property adjoined that of Benson, the small rancher from Kilgo. In a wedge shape the Hamilton Triple H came in just at this point. Would it be possible for Link and Helen to construct a smaller dam upstream that would suffice for their purposes?

Poring over the prints, he became convinced that such a change could be made. That chap, Tom McLendon, if he could be lured to Rawhide, could revise these drawings. And if they could complete a cut-off for Silver Creek before heavy snows came, it might be possible also to get in the foundations before winter set in. This cold spell, he knew, was but temporary. If the project could be hurried there was promise of a mid-summer crop of alfalfa to sell their skeptical neighbors!

The Star Loop owner roused from his immersion in thought of the scheme to realize that he had not yet started a fire in the stove. Going again to the kitchen, he returned with several matches in his hand. He approached the open stove and struck one on his boot, then tossed it inside.

The thin pine shavings took eager fight. Link closed the door and turned back to the plans.

That was the last he knew. For with the suddenness of a thunderclap in the reverberating hills, the entire ranch house seemed to burst into flame. There was a terrific roar. The very walls seemed to swell outward, and with force and concussion that hurled him against the far wall, the iron stove burst into bits as an explosion rocked the room.

CHAPTER VII.

The red glow of the burning ranch house was visible several miles over the prairie. Like a shaft of crimson the fire rose higher and higher, crackling in malicious glee as it devoured tinder-dry clap-boarding. Horses trotted whinnying their alarm to the far end of the corral, to huddle there with ears laid back, their tawny bodies reddened against the bars.

The shock had awakened Sime Halthy, by chance the only Star Loop hand in the bunkhouse. Sime, so it developed later, should not have been asleep at this time, but out with the remuda.

Shaken from his bunk by the terrific jar, he landed on his feet, dazed and startled. Seizing a gun, he rushed from the low bunkhouse—to stop aghast. His watery grey eyes went round. His cavernous jaw slackened, and for once Halthy forgot to tug at his ear. Veteran of many a cowland accident, he reasoned instantly that someone must be inside the ranch house, hence the explosion.

Already the fire groped hungrily toward the roof. Sime dashed to the rain barrel, found a thin skimming of ice on it, and broke it with a hard fist. He splashed the chill water over his clothing in a swift effort to soak himself. Then without hesitation he rushed to the front door of the house, and shading his eyes from the fearful heat, peered inside for sign of his employer.

Face-down and utterly unconscious, Link sprawled in the track of the fire that gnawed into dry flooring. Halthy sprang to his side. Kneeling, he pulled the rancher's arm around his neck. Then he grasped Fleming's knees and started outside with his burden.

Once he stumbled and almost dropped his employer. Somehow he kept on through licking tongues of fire that made the clothes of both men smoke as though any instant they would burst alive with flame. The sharp night wind struck them like a blow, its smart and sting painful to their scorched faces.

Link moaned. "Hang on!" Sime mumbled, coughing from the heavy smoke.

As he reached the corral and sank exhausted beside the juniper rails, hoofbeats sounded nearer. A man swept around the curve of the enclosure, and another. Waco Byrne hit the ground and came running.

"Link! Say, is he dead?"

Halthy was in another spell of coughing. He shook his head. At once Byrne dropped on his knees. "Eh," he flung at Tasker, his companion, "get Sime in the bunkhouse. Help some. Get him. There's a bear grease for his burns in a can on the shelf; it's the best thing there is." He squinted at Fleming. Then placed his ear close to his lips. "Breathin', all right. What the tarnation hooligans made the bull shebang go like that?"

Tasker was draping his fellow-waddie over his shoulder like a bag of flour. "Think the other buildin's'll catch?"

"We can't do anything about it now. The wind is changin', though. Let's hope the bombres there'll be folks arrivin' soon. Always gather fast to celebrate bad luck."

He carried Link inside the bunkhouse and carefully deposited him on a straw-filled mattress. When Tasker had applied whiskey to Sime and the gangling veteran had begun to curse angrily, Byrne forced some of the spirits between his employer's lips. Link sighed and fluttered his eyes open. Byrne at once liberally applied bear grease to his face, which was raw and scorched. His shirt was ripped half from his torso, exposing a long gash across his shoulder. Only a glance from window had cut as he hurtled into it. There was a rapidly swelling lump on his forehead and a score of minor bruises and cuts.

Hoarse shouts outside told Byrne that other Star Loop riders had come at a gallop. Little could be done, however; to form a bucket brigade from the spring was already worse than useless. Waco stepped to the door and cupped his palms.

"Soak down the other roofs, boys! Get the tools out o' that shed in case she goes!"

By now the house was almost entirely destroyed, and while Byrne watched a wall toppled in. His face took on a hard look. When he turned back Halthy was on his feet, swearing and demanding his gun.

"I'm gonna kill somebody for this!" he yelled. "I'm gonna kill the first lowdown—"

"Shut up and tell me what happened."

Sime gulped. "What happened? Yuh lunkhead, there was a helluva explosion! I—er, woke up standin' here in the middle of the floor. Thought it was Judgment Day for shore. Must have dropped off in a doze or somethin'," he added guiltily. "I just came in to change my boots 'cause one hurt."

A quick footstep and a low cry over them both whirled. "Link!" Helen Hamilton stood tense with worry, one hand clasped to her throat. "Wh-here is he?"

Waco squinted through the dim light of the oil lamp. Stifling an exclamation, he indicated the bunk on his left.

She ran to it, her oval face pale with trepidation. As she leaned over him Fleming opened his eyes. He tried to smile, but the pain of his burns and the fact that his eyebrows had been singed off gave him a gruesome look.

"I'm—all right," he managed to gasp between spasms of coughing. Then struck by a thought, he rose on one elbow. "The plans!" 2137

"Plans?" She stared, not comprehending at once. Then she flew out of the bunkhouse.

"Take it easy, Link. I'm sending one o' the boys for Doc Slater. I'll finish dressin' them cuts right off," Byrne promised.

When Helen returned her steps were slow with discouragement, her shoulders drooping. Hesitance was in her brown eyes as, filled with pain, they met those of the Star Loop owner. No words passed between them for a moment; then Link sighed and lay back.

"Gone," he muttered dully.

She strove to swallow the lump in her throat. "Roper and I heard about Soak Torney being shot. Of course I knew you hadn't done it, and I tried to stop the talk in town. Now the plans are burned, . . ."

There was a short silence during which Waco tiptoed out of the cabin. "Gosh!" he muttered to himself. "That look she gave him was worth gettin' burned for!"

"It means we can't start the dam this Fall. And next Spring it will be harder than ever to finance. It means hiring extra men, for we won't be able to spare any from our steers. There's the cost of new plans, too, and the loss of the alfalfa we'd have." The girl stopped. "How did this happen, Link?"

He told her as much as he knew. "I tossed a match in the stove and waited to see the pine shavings catch. Then I closed the door and stepped back to the plans again. Had them spread out on the table. It looked pretty plain that we could alter Torney's work a little and build a lighter system. All the directions were there how the job should be done.

He scowled past her, toward the door. "Why should a stove blow up like that? The pipe was open. There must have been dynamite in it, Helen."

"Dynamite!" A shudder racked her lissome figure. "Oh Link, I was—I was afraid you—"

"Mr. Lincoln Fleming, Esquire, here?"

(To Be Continued)

Humans Developing Fast

Our Descendants Will Withstand Superhuman Endurance Tests

The human race is developing faster than it ever did, in the opinion of Dr. Ales Hrdlicka, curator of anthropology at the Smithsonian Institution, Washington.

Dr. Hrdlicka, quoted by the American Magazine, says our descendants will be taller than we are, handsomer and better looking. They may even lose their fifth toes. Most will come through superhuman tests of endurance.

Dr. Hrdlicka has spent 39 of his 66 years studying hundreds of thousands of living and dead human beings from the Ice Age up to now. Six months of each year he spends digging up skeletons. To-day he wonders if some scientists will dig up his skeleton in 6,000 A.D. and call him a primitive man.

Woman's Ailments

ALL women at some period of their lives need a strengthening tonic like Dr. Pierce's Favorite Prescription. The young woman who suffers from pain during menstruation, the middle-aged woman who experiences "hot flashes" and the expectant mother who has nausea and other disagreeable symptoms, or the nursing mother who experiences "tired feeling" should take this tonic. Mrs. Chas. Kelly, Box 11 Dorchester St., Guelph, Ont., writes: "Favorite Prescription' is a wonderful tonic. I suffered from pain in my back and limbs and was very nervous and tired before I started taking 'Favorite Prescription.' This tonic is a wonderful health to me. I am glad to say I am strong and healthy and relieved me of that tired feeling, also the many aches and pains to which women are subject during motherhood." Buy today!

Mechanical Ears

New Method Of Piloting A Plane By Sound Alone

Mechanical ears for piloting a plane by sound alone, an entirely new principle in aviation, were described to the Institute of Aeronautical Sciences. Luis De Florez, of the De Florez Engineering Company, of New York, who has spent three years developing them and flown many hours blindfolded, gave a "ground demonstration" with the instruments.

"It is possible," Florez said, "that a blind man, with his ears accurately timed hearing, might become a better pilot than one who can see."

All "blind" flying heretofore has been done with the eyes, watching instrument boards. But with "mechanical ears" the pilot flies wholly by listening to a pair of ear phones. He can use them in fog, clouds, darkness, on any kind of plane.

The phones are connected with a tiny propeller, set far out on the leading edge of one wing. This propeller is the size of a toy pin wheel. Like the toy, it changes speed with acceleration of the plane.

It runs faster if the plane dips, slower if it ascends, steady if level. The propeller drives a little generator. This generator hums in the pilot's ears.

Its note grows shriller for dip, lower for ascent, tells him whether the plane is level. It tells him quicker than the eye could do the same thing. For the electric current is amplified, so that a slight deviation shrieks its warning.

In the phone circuit there is a small gyroscope, set to indicate the slightest turn of the ship to left or right. If the plane turns, this gyro cuts off one ear phone.

The pilot then knows he is starting to turn toward the side on which he still hears the hum. Here, too, the sound weaning can be quicker than the eye.

Little Helps For This Week

Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage. Galations 5:1.

They are slaves who fear to speak
For the fallen and the weak;
They are slaves who will not choose
Hatred, scoffing and abuse,
Rather than in silence shrink
From the truth they needs must think.
They are slaves who dare not be
In the right with two or three.

The real corrupters of society may be, not the corrupt, but those who live in it and see its abuses, enjoy the salt that has lost its savor, the innocent who have not the moral courage to show what they think of effrontery or impunity, the serious who pass timidly surrounds before some loud-voiced scoffer, the heart trembling all over with religious sensibilities that yet suffers through false shame to be beaten down into outward and practical acquiescence by some rude and worldly nature.

An Unusual Accident

Static In Cat's Fur Causes Explosion In Gas Chamber

Inspector E. G. McDonald of Hamilton, Ont., was the victim of burns and shock from a remarkable sequence of events—a cat, a gas chamber and static electricity.

The inspector took a stray cat to the gas chamber at the city pound. The cat objected, squirming in a lively manner as McDonald thrust it into the gas. Friction in the fur created static electricity.

There was a bang. McDonald recovered consciousness on his back, his clothing blown or burned from his body. The chamber was knocked to pieces. The cat hasn't been seen since.

Many Applications Received

More than 5,000 applications were received up to January 31 under the Federal Prairie Farm Rehabilitation Act, by the Dominion water development committee at Swift Current. The committee is interested in approving applications for the construction of small dams, dug-outs, reservoirs and irrigation projects in the prairie provinces.

"Who is your baby really like?"

"His has my wife's eyes, my nose, but I think he got his voice from the motor horn."

The 12-wired bird of paradise has 12 wire-like feather shafts protruding from its flank feathers.

The thumb was considered the fashionable "ring finger" during the 15th and 16th centuries.

ROYAL YEAST CAKES
keep Full Strength

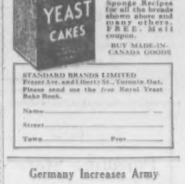

Royal Yeast Cakes and Royal Sponge Recipes make perfect breads like these . . .

Use Royal Yeast Cakes and you'll be sure of perfect leavening. That's because each cake comes *individually* protected by its own *air-tight* wrapper. No other dry yeast has such protection. You can grow with Royal Yeast Cakes the day you buy them—or weeks later—and count on the same fine results each time.

Germany Increases Army

Is Forging Ahead With Her Rearmament Plans

Germany is forging ahead with her rearmament plans.

Inquiries made at Berlin indicate that by the end of this year the men capable of being put in the field—including those trained and partly trained—will number at least 1,000,000.

It is predicted on good authority that when 1936 ends, Chancellor Hitler will have completed the reorganization of the 36 army divisions announced last May. These comprise more than 500,000 regulars.

"Caveat Emptor"
—an old Latin phrase, meaning, literally: "Let the Buyer Beware," and expressing exactly the basis upon which most business was transacted in early Roman days—at the Buyer's Risk.

Times have changed since that unregenerate era, fortunately. Most business is nowadays on a far healthier standard. The Buyer—the Customer—is actually protected today by the merchant from whom he makes his purchase.

This policy finds no higher expression anywhere than in the EATON Catalogues. ACCURACY of statement and illustration, regarding every item presented, is a watchword of every EATON publication. Every line of description is checked and double checked to ensure that no misstatement, exaggeration or overemphasis occurs. Where there is any doubt, the statement in question is tested by scientific analysis and PROVED correct before it is permitted to appear.

It's extra trouble, of course—takes more time and costs more money. But it's well worth while to us to have hundreds of thousands of Western men and women know, as they do, that "it's SAFE to buy from EATON'S."
